

Method of Application

Broadcast feed in the *Penaeus vannamei* shrimp culture pond manually or using devices like autofeeders etc, with the guidance of an aquaculture technical expert.

Precautions

Feed should be stored in a cool, dry place with good ventilation

Avoid stacking bags as the weight may affect pellet size and stability

To be consumed immediately once opened

Shelf Life

Best before 3 months from date of packaging

Note: The feeding table given is a general guideline based on biomass and days of culture. Factors such as weather, water quality parameters, shrimp health, appetite, pond management and more can influence feeding. Therefore, feeding must be correlated with check tray observations and modified accordingly.

NO ANTIBIOTICS NO HORMONES NO TRAMPLING
